

Ubuntu installation on VirtualBox Guide

Click on the following link to go to the official site of the Ubuntu to download the open-source desktop operating system.

<https://ubuntu.com/download/desktop>

Download the latest version Ubuntu 22.04.3 LTS by clicking on the green box.

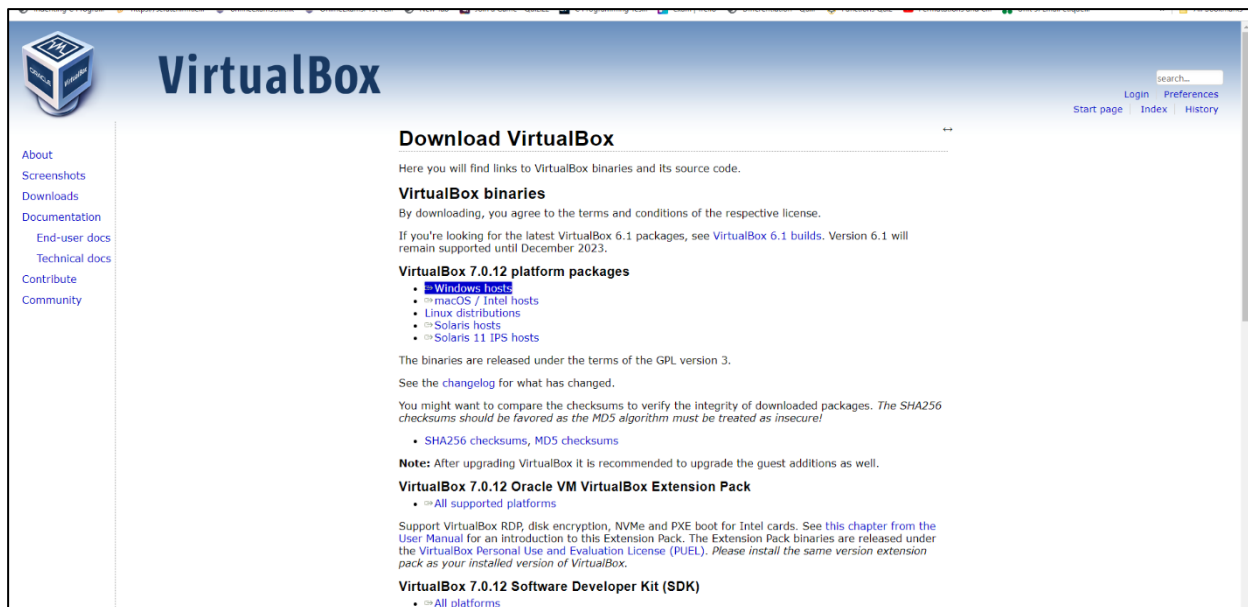

VirtualBox

VirtualBox is a free and open-source software program for virtualizing created by Oracle Corporation. It creates a virtual machine where the user may run a different operating system and functions as a hypervisor. The operating system that VirtualBox operates on is known as the "host" OS. The operating system that runs on a virtual machine is referred to as the "guest" OS. VirtualBox runs on Windows, Linux, Solaris, Open Solaris, and MacOS as the host operating system.

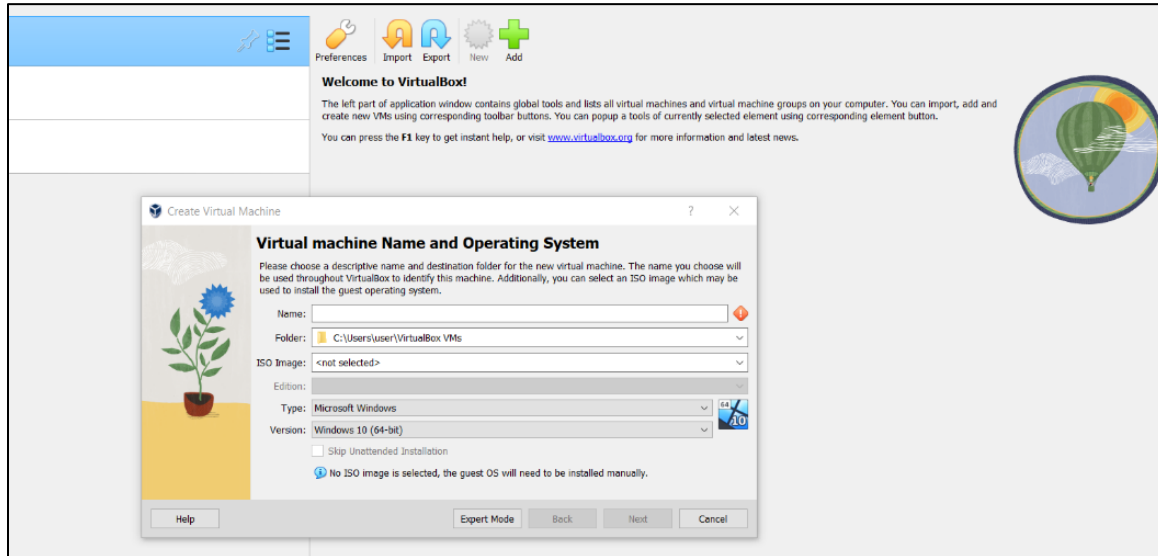

You can use the following link to go the official website to download the software and install it.

<https://www.virtualbox.org/wiki/Downloads>

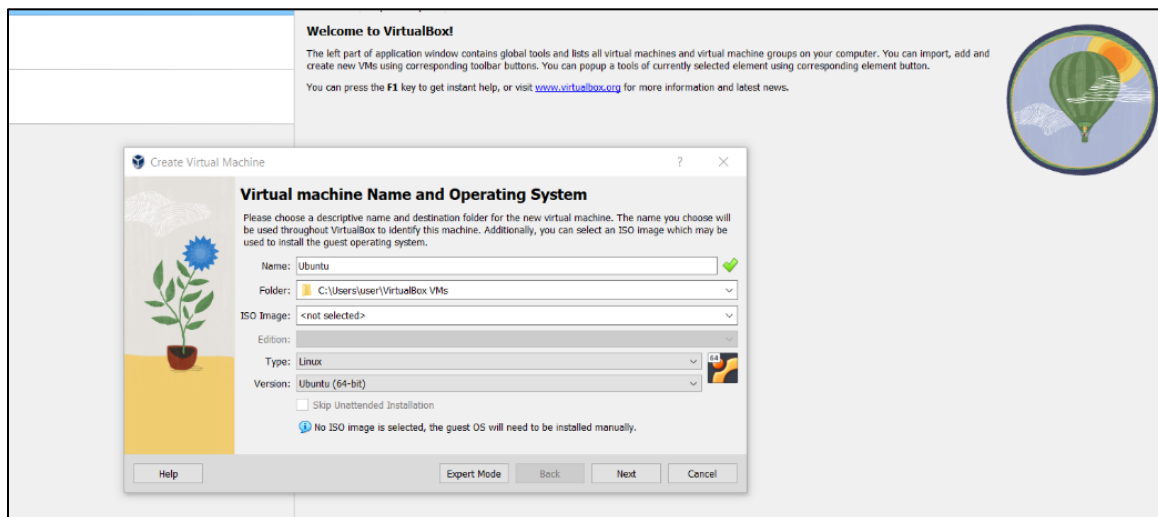

Setup for Ubuntu

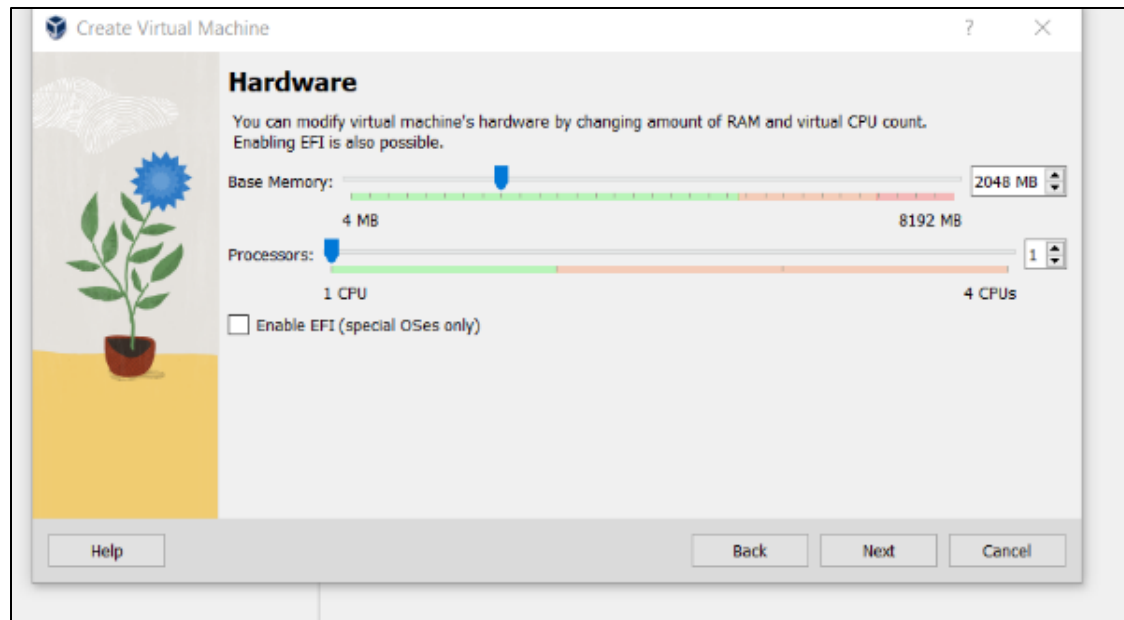

First, open VirtualBox, then click "New" to create a virtual machine.

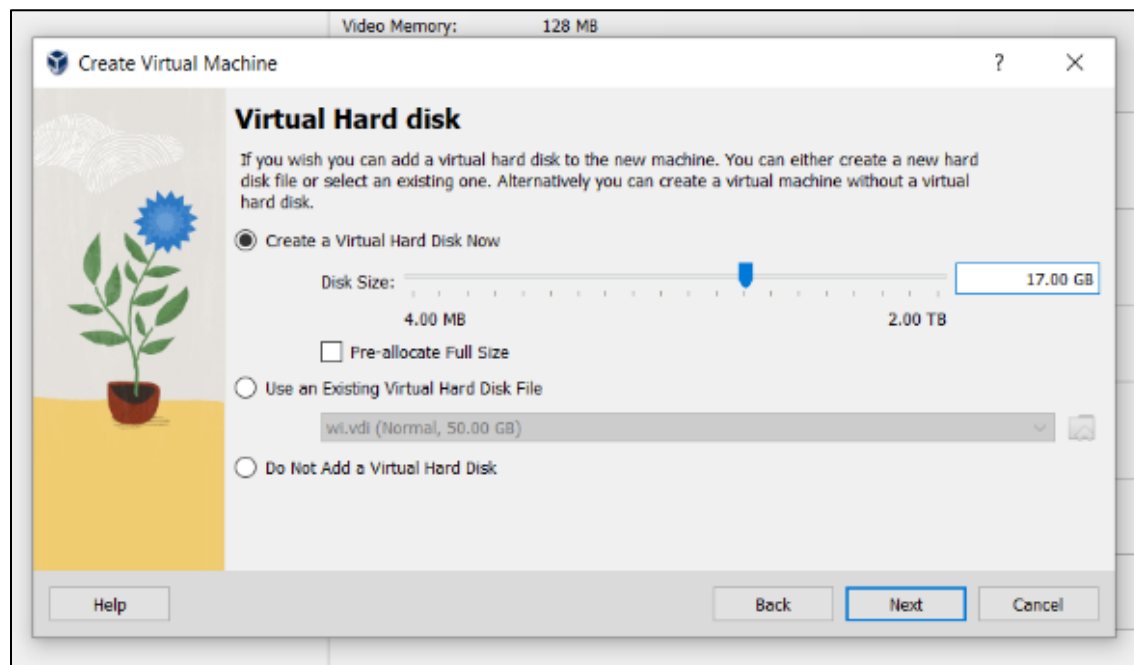

Enter "Ubuntu" as the name, select "Linux" as the type, and select Ubuntu (64-bit) as the version.

Select any amount of memory you wish, but don't add more than 50 percent of your total RAM.

Check the "Create a virtual hard disk now" option and allocate hard memory.

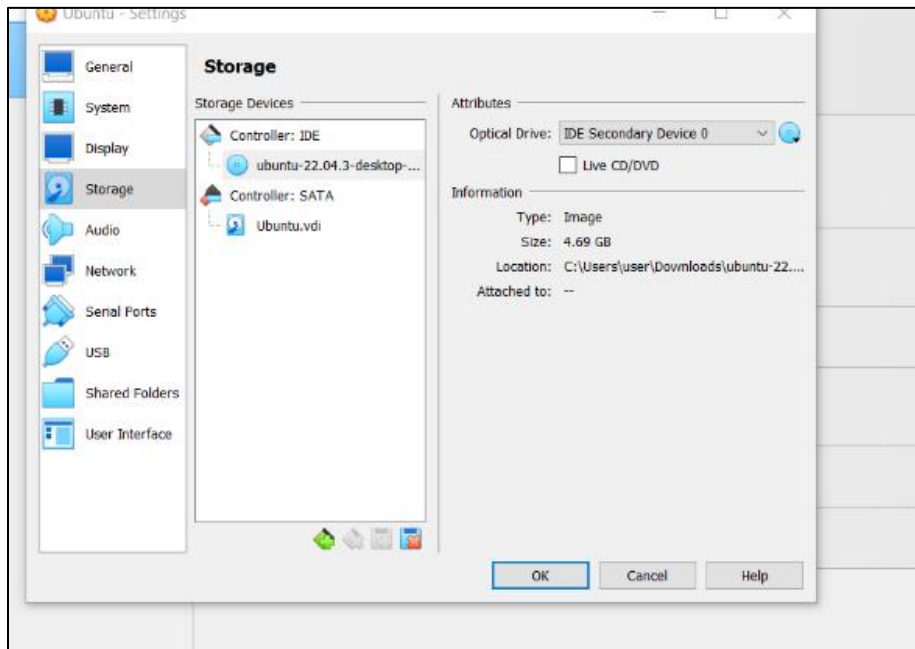

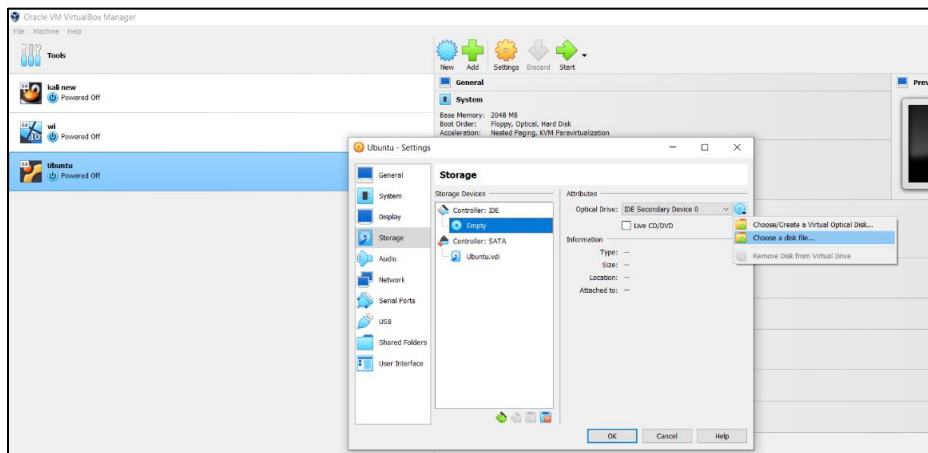

After click on next you'll see Ubuntu in your dashboard.

Now, we must set up the Ubuntu disk image file (.iso).

To set up the Ubuntu disk image file, go to settings and follow these steps:

- Click "Storage"
- In storage devices, click "Empty"
- In attributes, click the disk image and "Choose Virtual Optical Disk File"
- Select the Ubuntu disk image file and open it

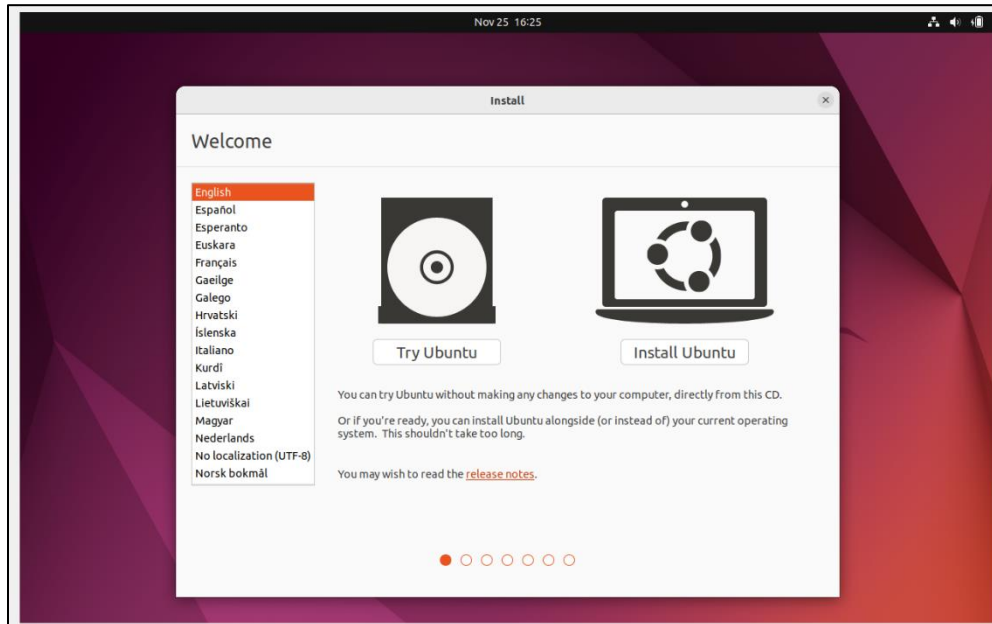

Click OK.

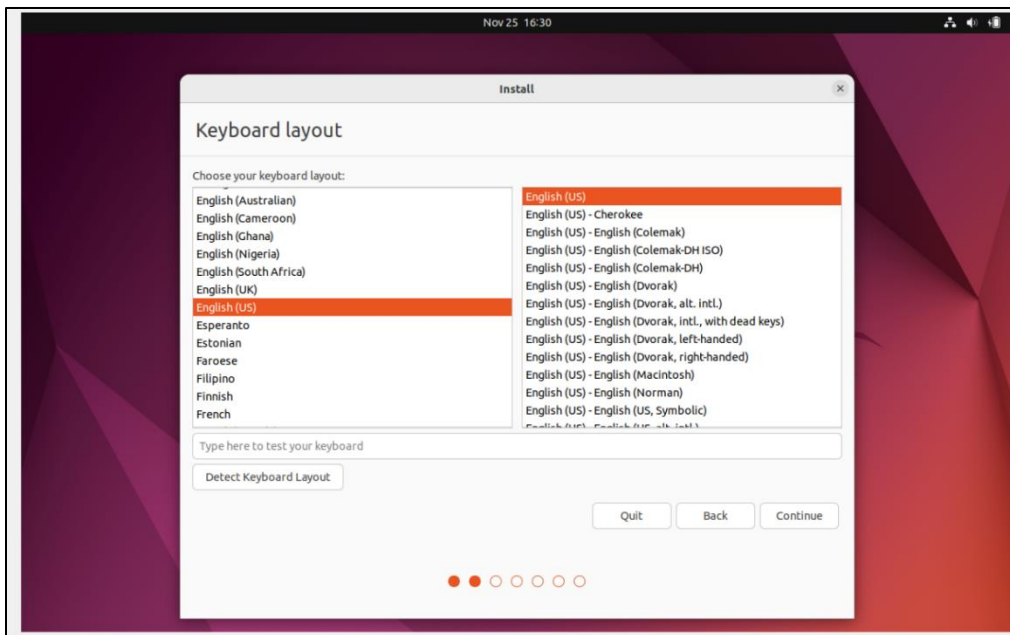

Ubuntu OS installation in VirtualBox.

Start the Ubuntu machine.

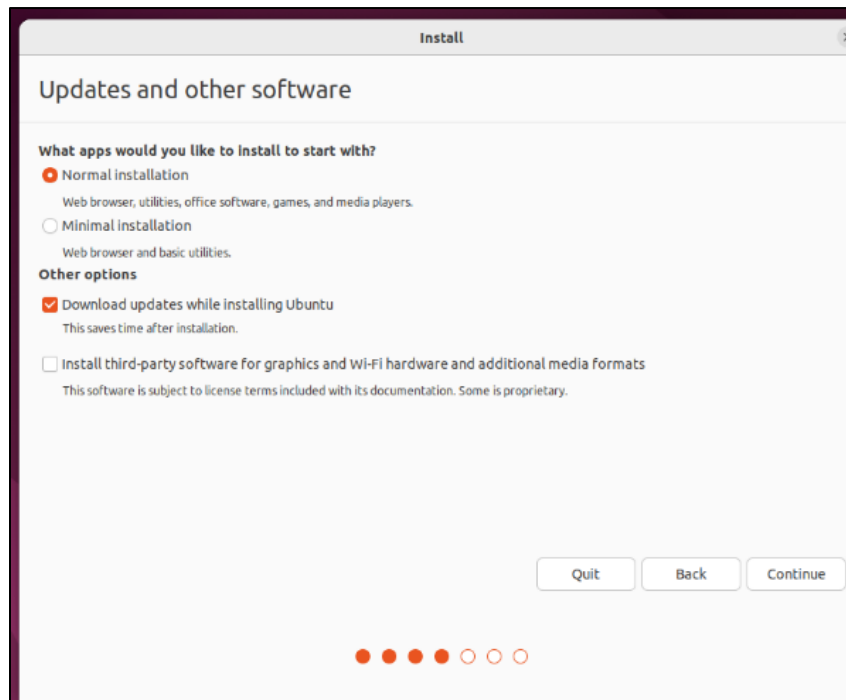

Click install Ubuntu.

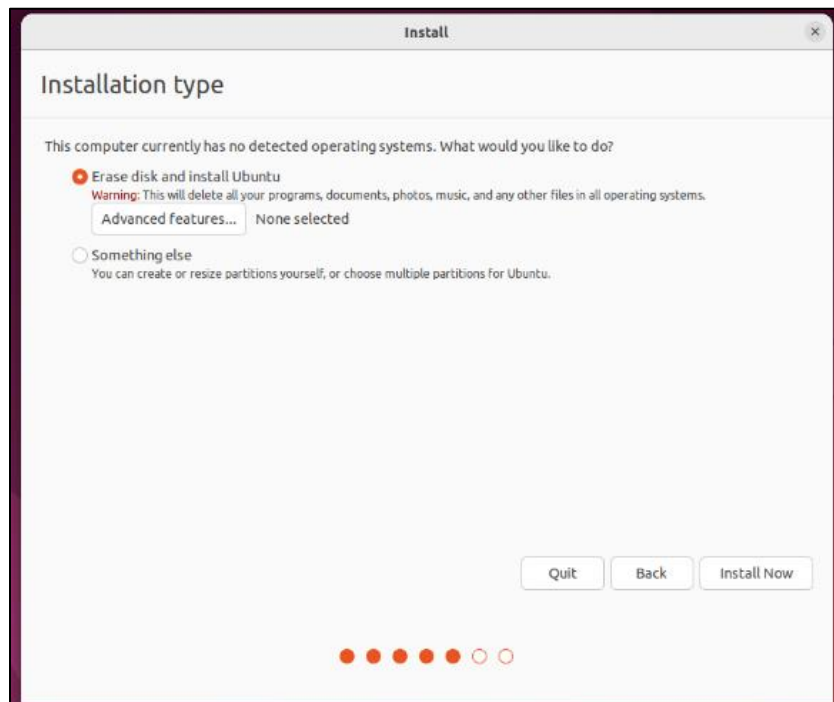

Select keyboard layout.

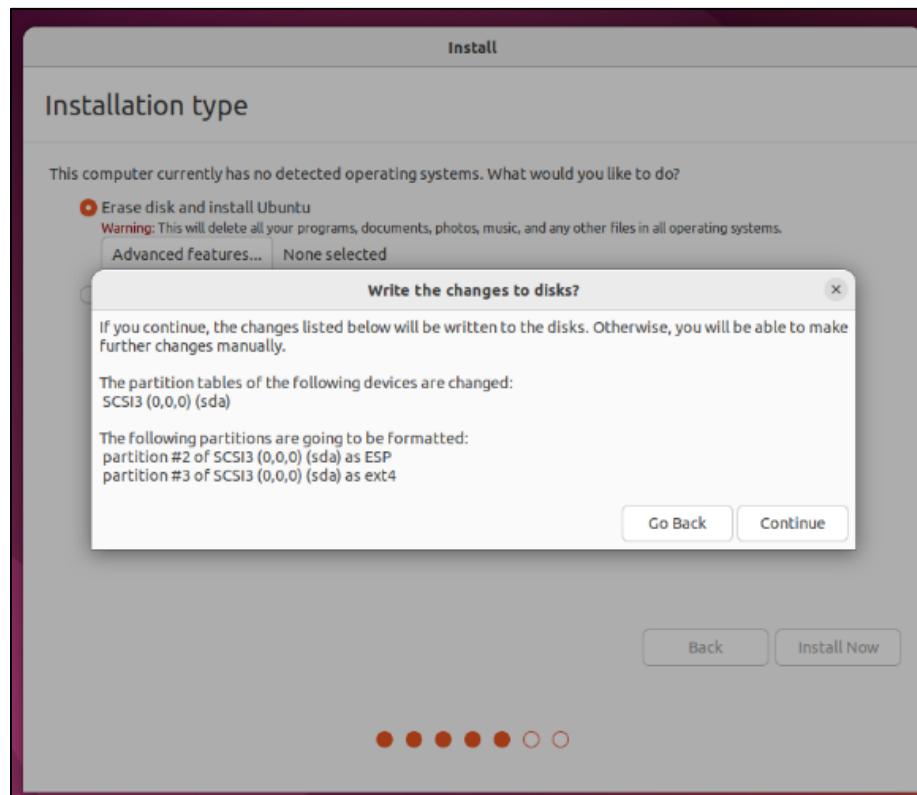

In the "Updates and other software" section, check "Normal installation" and continue.

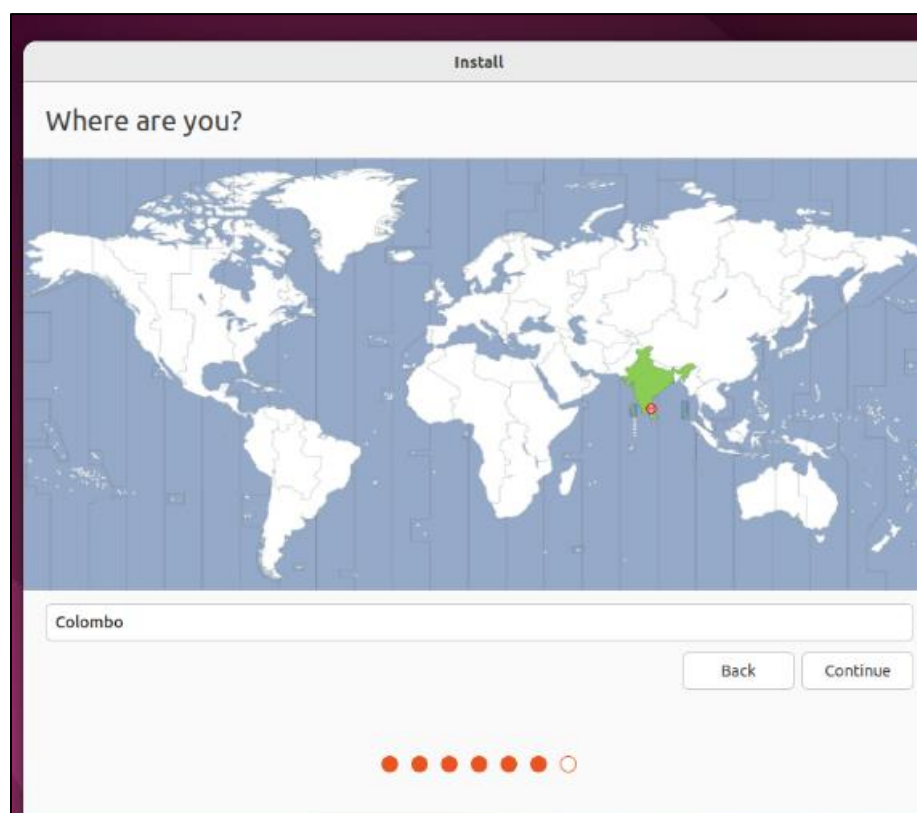

In "Installation type", check "Erase disk and install Ubuntu".

Click "Continue".

Choose your current location.
